

WATER CHILLER CHI11-033

WATER CHILLER CHI11-033

Water chiller is a device used to lower the temperature of water. Water chiller use water as a refrigerant instead of toxic chemicals. This makes them safer for people who have contact with them. Water chiller are overall more efficient. Used in Biotechnology, Laser, Analytical, Automotive, Packaging, Injection Molding, Die Cutting, Food, Beverage, Chemical, Machine tool, Semi-conductor.

Also known as Laboratory Water Chiller.

CHI11-033 WATER CHILLER

The well-known product spleen compressor, high-efficiency shell and tube condenser, evaporator combination, super refrigeration, power saving PID microcomputer full-function control, easy to operate, can accurately control the water temperature within 3°C~35°C.

Unique new design stainless steel opening Type thermal insulation water tank, easy to clean and repair, reasonable internal pipeline layout, effectively reducing energy consumption.

Copper pipes are welded with Smick L30345% silver electrode, with high density and long life.

With current overload protection, high and low voltage switch, delay protection, over temperature protection, antifreeze, abnormal indication system.

SPECIFICATIONS

Model	CHI11-033
Freezing capacity	
kw	33.3 kw
Compressor	
Power	6hpx2
Condensor(Water Chiller)	
Type	Tube-in-shell Condensor
Water tank capacity	160 L
Pump	
Power kw	1 hp
Flow rate	115 l/min
Weight	430 kg
